

What Not To Do When Working with Node.js Project

Kheang Kim Ang

Avoid Folder with Space

It's **better not to** keep a Node.js project inside a folder whose name contains spaces.

- Running scripts (*npm run* commands might fail or behave strangely).
- Writing paths in code (you'd have to remember to escape spaces or wrap paths in quotes).
- Using environment variables, Docker, CI/CD pipelines, and other tools — many assume space-free paths for simplicity.

Avoid Folder with Space

Document \ Y3 Programming \ ICT W3 \

Better practice:

Use hyphens -, underscores _, or camelCase instead.

Example:

my-node-project/

myNodeProject/

my_node_project/
